DETAILED ACTION

Election/Restrictions

The Examiner has given careful consideration to applicant's Response filed on March 10, 2005, and believes that the Restriction Requirement of February 15, 2005 should be withdrawn. Claims 1 to 29 have been examined.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 to 29 are rejected under 35 U.S.C. 102(b) as being anticipated by European Patent Application No. 1 143 026 A1 (EP '026).

EP '026 discloses heat resistant, low alloy steel compositions having the same alloying elements as claimed by the applicant with alloy elemental ranges that overlap applicant's claimed alloy elemental range limits. Prior art which teaches a range within, overlapping, or touching the claimed range anticipates if the prior art range discloses the claimed range with sufficient specificity. See MPEP 2131.03 and *Ex parte Lee*, 31 USPQ2d 1105 (Bd. Pat. App. & Inter. 1993). Also, EP '026 provides much information about the relationships between the chemical composition of low alloy Cr-Mo steels and precipitates (e.g., metal carbides) within alloy grains and at grain boundaries. The heat resistant, low alloy Cr-Mo steels are manufactured by methods which include normalizing, tempering, and hot rolling. The heat resistant, low alloy Cr-Mo steels can be used as heat exchangers, steel pipes, steel valves, and other parts or members that require welding. See line 40 on page 4 to line 57 on page 11 and lines 15 to 21 on page 20.
